## FLECOBAGS IN CLEANROOM QUALITY

In addition to the standard Flecobags made from Flecofilm types DL & ML, we can also produce bags from provided film on request.

## FLECOBAGS IN CLEANROOM QUALITY

ESPECIALLY FOR APPLICATIONS IN THE PHARMACEUTICAL INDUSTRY, AS WELL AS FINE CHEMICALS, FOOD AND COSMETICS, WE HAVE DEVELOPED THE FLECOFILM, WHICH IS PROCESSED INTO FLAT BAGS MANUFACTURED IN CLEANROOM CLASS ISO 7.

We are certified according to DIN ISO 15378 and DIN ISO 9001 and the pharmaceutical film "Flecofilm" used for this purpose is made of pharmaceutical grade polyethylene accordingly:

- EUR Pharmacopoeia 3.1.3. and 3.1.5.
- USP <88>, in vivo reactivity tests
- USP <661>, physicochemical testing

Depending on the application, the bags can be made of highly transparent Flecofilm ML (MonoLayer) or the electrically conductive Flecofilm DL (DoubleLayer).

Due to a non-migrating permanent antistatic agent in the outer layer of the double-layer film, electrical conductivity is achieved, which ensures a significantly improved flow behaviour of the product and thus your product comes into contact only with pure polyethylene.

In addition, Flecofilm DL and the cleanroom-quality flat bags made from it are suitable for use in potentially explosive atmospheres in zones 20, 21 and 22 (dusts), as well as in potentially explosive gas atmospheres in zones 1 and 2 in the presence of gas/air or vapor/air mixtures in explosion groups IIA and IIB (if no strong charge generating processes are present).
